

# CERAMIC SOLUTIONS

## "*Lamella*<sup>™</sup> CERAMIC FLOOR SYSTEM"

The number one challenge in facility floor care maintenance is restroom floors.

## Lamella Ceramic Floor Finish

*LAMELLA*, meaning shield, is a product designed to do exactly that. Ceramic in restroom floors poses a continuing challenge in floor care maintenance. Lamella will provide the protection that is needed in the harshness of extremes of restroom floors.

The use of standard acrylic floor finishes has never proven to be a solution for complete care, protection, and maintenance

needed in restrooms. Until now, acrylics have only been a temporary solution, which involves countless hours of care that cannot hold up to the stronger chemicals and other situations facing a clean restroom.

Introducing *LAMELLA CERAMIC FLOOR FINISH SYSTEM*, a floor finish that will outlast, outperform and outshine all other finishes.

## Steps to Change

### Deep Clean Grout

#### **LAMELLA GROUT CLEANER**

Lamella Grout Cleaner is formulated to lift and breakdown embedded grime in grout and worn ceramic surfaces.

### Etch & De-Glaze Ceramic

#### **LAMELLA ETCH & DE-GLAZE**

Lamella Etch & De-Glaze is a premium pretreat for ceramic & baked on finishes of ceramic tile. Lamella Etch & De-Glaze will properly etch the glazed surface of the ceramic. This will allow for proper adhesion of the Lamella Ceramic Floor Finish.

### Flood Wash & Rinse

#### **NEUTRALIZE with WATER**

After the cleaning, de-glazing and etching process, it is extremely important to rinse the surface free of residue and contaminants, as well as bringing the surface to a neutral pH. Rinse, rinse, rinse the surface with clean water several times to ensure proper adhesion. Residue from the cleaning and etching phase can prevent a successful job.

### Topcoat

#### **LAMELLA CERAMIC FINISH**

Finally, after sufficient dry time, coat the prepared surface with Lamella Ceramic Floor Finish for a long lasting extremely chemical resistance finish.
